Continuation of 11. does NOT place the application in condition for allowance because: Regarding the applicant's argument that no mention is made by Japenga of jointly utilizing both parameters before making a handover (see pages 3-5), the examiner respectfully disagrees. Japenga discusses evaluating Ec.No as a first parameter and evaluating RSCP as a second parameter and if both the first and the second criteria are satisfied the UE camps on the selected cell ([0028][0029]). The examiner wants to point out that selecting a cell and camping on a cell are two different things. By selecting a cell as a potential handover candidate does not mean the UE has already camped on or performed the handover. Japenga specifically discloses in [0029] "if the second parameter satisfies a second criterion,..., UE 16 camps on the selected cell". In other words, the UE only comps on/ handovers to the new cell after both parameters are evaluated and satisfied the thresholds.

In response to applicant's argument that the references fail to show certain features of applicant's invention (see pages 2-3 concerning active mode vs. idle mode), it is noted that the features upon which applicant relies (i.e., active mode) are not recited in the rejected claim(s). Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See In re Van Geuns, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993).

Concerning the applicant's arguments regarding combination of references, all of the references are from the same field, i.e. communication systems and concern analogous topics. Therefore, the examiner contends that the references would be combinable to one skilled in the art..
